## EDUCATION

**BA of Electrical and Computer Engineering**

**2018 - 2021**

School of Electrical and Computer Engineering of Applied Studies

## SKILLS

**React** **TypeScript** **JavaScript** **State Management** **Zustand** **Redux** **HTML** **CSS** **RESTful APIs** **GraphQL** **Webpack** **Vite** **Performance Optimization** **Jest** **React Testing Library** **GitLab CI** **GitHub Actions** **CI/CD** **Docker** **Firebase** **Responsive Design** **Mentoring** **Communication** **Cross-Browser Compatibility** **Collaboration Problem-Solving** **Attention To Detail**

## LANGUAGES

- **Serbian** - Native
- **English** - Fluent
- **Spanish** - Conversational
- **Italian** – Beginner

## PROFESSIONAL SUMMARY

Senior Frontend Software Engineer with 5+ years of experience building production-grade **React** and **TypeScript** web applications. Proficient in frontend architecture, state management with **Zustand** and **Redux**, and **performance optimization** for real-time interfaces. Built the StopChurn frontend architecture and **reusable component library** from scratch, and a configurable white-label online casino platform with a backoffice, supporting multiple client deployments, including high-frequency sportsbook **WebSocket** interfaces optimized for responsive updates. Experienced in mentoring junior developers and implementing **CI/CD** practices.

## PROFESSIONAL EXPERIENCE

### Lead Front-End Engineer at 167Pluto, Belgrade, Serbia (Remote)

**06/2023—Present**

- **Led** the development of a configurable **white-label online casino** platform and its **backoffice**, built from scratch and deployed for multiple clients, including **payment provider integrations**, bonus and reward systems, and a fully **responsive UI**.
- Engineered the **frontend architecture** for the **StopChurn** platform with React, **TypeScript**, and **Zustand**, delivering a **reusable component library** and consistent UI patterns.
- Developed a lightweight, platform-agnostic **Preact popup script** that can be embedded on multiple websites and platforms to display targeted promotions, wired into **StopChurn** for campaign control.
- Optimized **real-time performance** of sportsbook live-feed interfaces using memoization and **narrow subscriptions**, keeping high-frequency data updates smooth across devices.
- Integrated **RESTful APIs** and **GraphQL** for features including analytics and payments, working with modern build tools such as **Webpack** and **Vite** in a **monorepo** setup.
- Automated CI/CD with **GitHub Actions** and **GitLab CI,** improving deployment efficiency and code quality through pre-commit checks with **ESLint** and **Husky**.
- **Mentored junior developers** through hands-on guidance and improved **code-review workflows**, raising code quality and team delivery speed.

### Front-End Engineer at IT Labs, Belgrade, Serbia (Remote)

**05/2022—06/2023**

- Reworked legacy drag-and-drop features from **Angular** to **React**, modernizing the functionality within the **microfrontend** architecture while keeping the experience consistent for users.
- Optimized **accessibility and performance** by implementing semantic **HTML, CSS,** and ensuring keyboard navigation and **screen-reader support**, while adhering to strict performance budgets.
- Participated in distributed **agile planning** and **code reviews,** collaborating closely with the Product Owner and team members across the USA to align on project goals.

## Front-End Developer at Neotech Solutions, Belgrade, Serbia

### 07/2021—05/2022

- Developed **responsive web interfaces** for online casino and sportsbook platforms, ensuring **cross-browser compatibility** and optimal performance.
- Engineered the Lucky6 casino game frontend, focusing on **animation**, **usability**, and delivering client-driven features.
- Wrote a **Dockerfile** and used **Docker** to run the Lucky6 project locally in a containerized development environment, so the app ran the same way on any machine and new developers could get started faster.

## Laboratory Demonstrator at School of Electrical & Computer Engineering, Belgrade, Serbia

### 10/2020—06/2021

- Taught and **mentored** students in Engineering Mathematics and Object-Oriented Programming, adapting technical explanations to diverse learning styles, enhancing **communication** and **collaboration skills.**
